

GIMM 300

Hmw 2

1. Go to <http://www.w3schools.com/html/default.asp> and do the html tutorials up to (and including) the attributes tutorial.
2. Put the html code you write for any exercises at the end of the tutorials into a nicely formatted document with a brief explanation of what the code does. This will be your own reference when you design your webpage, but also upload it to blackboard for full credit.
